

Saga Subsea ROV Operable Magnet

Your Trusted Partner for Offshore Engineering,
Equipment Rental, Personnel & Ship Agent
Services

The ROV Operable Magnet is designed for attaching tooling to magnetic surfaces. These are frequently used on Drilling Tools and also on saws etc. We can also deliver them added to a ROV Grabber Bar for use as a grabbing point for ROV on structures where this is not present. The magnets are modified so that they can be engaged and disengaged by a lever using ROV Manipulator. They are fitted with a lubrication point for filling internally with grease. This to prevent water ingress.
